

LEGAL NOTICE NO. 90

REPUBLIC OF TRINIDAD AND TOBAGO

THE ENVIRONMENTAL MANAGEMENT ACT, CHAP. 35:05

NOTICE

MADE BY THE ENVIRONMENTAL MANAGEMENT AUTHORITY UNDER
SECTION 41 OF THE ENVIRONMENTAL MANAGEMENT ACT

THE ENVIRONMENTALLY SENSITIVE SPECIES
(GREEN TURTLE) NOTICE, 2014

1. This Notice may be cited as the Environmentally Sensitive Citation
Species (Green Turtle) Notice, 2014.

2. In this Notice—

Interpretation
Chap 35:05

“Act” means the Environmental Management Act;

“Authority” means the Environmental Management Authority
established under section 6 of the Act;

“disturbance” means any act that would affect the animal
(whether on land or in the sea) or its habitat. It includes any
action that affects the life of the animal and the animal’s
ability to swim, reach the shore, nest, return to the ocean
and migrate onwards. These actions may include but not be
limited to instances of poaching, touching, prodding,
restraining or feeding the animal, obstructing the animal in
the sea, standing or sitting on the animal, riding the animal
as well as the use of flash photography or light sources near
the animal during its nesting process;

“ecosystem” means a dynamic complex of plant, animal and
micro-organism communities and their non-living
environment interacting as a functional unit;

“environmentally sensitive area” or “ESA” means any defined
portion of the environment so designated under section 41 of
the Act;

“environmentally sensitive species” or “ESS” means any species
of living plant or animal so designated under section 41 of
the Act;

“hunt” has the meaning assigned to it in rule 3(5) of the Rules;

“indigenous” means native to a particular area (may exist in
other areas);

“Relevant Authority” means the Authority and any other governmental entity with jurisdiction under existing law;

“Rules” means the Environmentally Sensitive Species Rules, 2001;

“taking” means to capture physically or to get into one’s possession by using force;

“trade” means to export, sell, expose for sale or otherwise dispose of; and

“wise use” means the permitted activities listed in Part IV.

Designation Part I 3. The Authority hereby designates as an ESS the animal described in Part I.

Reason for designation Part II 4. The reason for the designation of the ESS is to meet the objectives set out in Part II.

Limitations on use and activities Part III 5. The limitations on use of, and activities with regard to the ESS with which compliance is required, are as specified in Part III.

Permitted use and mitigating measures Part IV 6. Subject to clause 5, the wise use of the ESS is permitted and the mitigating measures to be undertaken are as specified in Part IV.

PART I

DESCRIPTION OF THE ESS

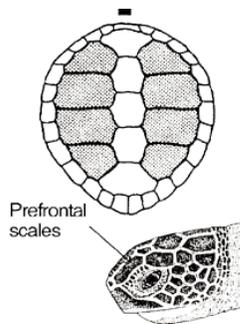

<i>ANIMAL</i>	<i>COMMON NAMES</i>	<i>SCIENTIFIC NAME</i>
Green turtle Greenback		<i>Chelonia mydas</i>

This species is named for the greenish colour of its body fat. Green turtles have a blunt beak and a single pair of scales called the prefrontals on top of their head between their eyes. They possess four pairs of costal scutes. The colour of their carapace/shell varies from light brown to dark brown, sometimes with a hint of olive. The margin of their carapace is smooth and their paddle-shaped limbs possess one claw. Additionally, the carapace has wavy or mottled dark marks with blotches of dark brown. Their plastron or shell on the underside is yellowish in colour. Young green turtles have a blackish or greyish carapace that goes onto the margins of their shell and flippers. The plastron of young green turtles is dusky white.

Adults weigh around 230 kg (500 lbs) and measure between 37 to 47 inches (3-4 feet) in shell length. Caribbean green turtles reach sexual maturity between 18 to 36 years of age. Females lay between 2 to 6 clutches of soft-bodied, white eggs every 12 to 15 days within a season and return to nest every two to three years. Clutch size varies but is likely to be between 75 to 150 eggs. These eggs hatch after approximately two months of incubation. Green turtles occasionally nest on the shores of Trinidad mainly on the north and east coasts and in Tobago. Their nesting period is believed to be between February and August each year and continues into September and October, at least at Matura.

Green turtle post-hatchlings are pelagic, but juveniles, sub-adults and adults are herbivorous bottom feeders feeding on sea grasses and algae. They are generally found on broad expanses of shallow sandy flats covered with sea grass or seaweed areas. They can also be found on coral reefs. They can be found year round in these nearshore habitats around Trinidad and Tobago.

The International Union for Conservation of Nature's Red List catalogues green turtles as endangered species. They are typically killed for their meat, eggs and accidental capture through fishing nets and lines.

- 1 pair prefrontal scales
- No over-lapping shell scutes
- Round face, serrated jaw
- Juvenile color and pattern variable
- Adult color dark gray green
- To 230 kg, shell to 125 cm

PART II

OBJECTIVES OF THE DESIGNATION

- I. The ESS is indigenous to Trinidad and Tobago.
- II. The ESS is an animal that is in danger of extinction.
- III. In furtherance of Schedule I of the Rules, compliance with the Government's international obligations under the following Conventions:
 - (a) the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) which entered into force in Trinidad and Tobago on 18th April, 1984;
 - (b) the protocol concerning Specially Protected Areas and Wildlife to the Cartagena Convention (SPAW Protocol), which entered into force in Trinidad and Tobago on 18th June, 2000;
 - (c) the United Nations Convention on Biological Diversity (CBD) which entered into force in Trinidad and Tobago on 1st August, 1996; and
 - (d) the Convention for the Protection and development of the Marine Environment in the Wider Caribbean Region (Cartagena Convention) which entered into force in Trinidad and Tobago on 24th January, 1986.
- IV. In furtherance of Schedule II of the Rules, the objectives of the designation are—
 1. Conservation of biological diversity and protection of the environment including—
 - (a) maintenance of species' abundance and diversity;
 - (b) the maintenance of a reproductively viable species population; and
 - (c) ensuring the conservation of the species.
 2. Logistic support, e.g., environmental education and information sharing, including—
 - (a) the conduct of research on the species contributing to the information based on the species and the continued development of management and recovery plans; and

- (b) the development of awareness and educational programmes about the species for the public of Trinidad and Tobago.

V. In furtherance of Schedule III of the Rules, protection of an animal referred to in the following written Laws:

- (a) a protected animal referred to in section 2 of the Conservation of Wildlife Act; and Chap. 67:01
- (b) the protection of Turtles and Turtle Eggs (Amendment) Regulations, 2011. Legal Notice
No. 201 of
2011

PART III

LIMITATIONS ON USE AND PROHIBITED ACTIVITIES

For the protection of the ESS, the following activities are prohibited unless otherwise approved by the Relevant Authority in accordance with existing laws:

- (a) the taking, removing, harming, injuring, hunting, selling or killing of the ESS and possession of, or trade in any specimen of the living animal and its parts, eggs and products;
- (b) deliberate or reckless capture or endangerment of the ESS through the setting of nets and other fishing activities;
- (c) deliberate or reckless capture of the ESS in commercial shrimp trawler nets;
- (d) the use of any device or substance that may harm, stun or impact negatively on the ESS. The negative impacts would be, but not limited to, those that would impair the sight, hearing, ability to swim or move of the ESS or its ability to detect prey and predators or affect its habitat or nesting ground;
- (e) the sale, consumption, possession, offering or storage of the ESS;
- (f) dumping, littering or polluting, including the discharging or depositing of any substances that are injurious to the ESS which does not comply with the provisions made under the Act;
- (g) causing underwater noise that may negatively affect the species during its breeding periods or above-water noise that may negatively affect the species during its nesting period;
- (h) the disturbance of the ESS at any time;

- (i) the removal and exportation of the ESS or any part thereof, except for scientific research approved by the designated management authority;
- (j) disturbing, destroying or any other action or habitat alteration (including beach mining, land reclamation, and alteration due to fisheries, agricultural and industrial development) that will alter or upset the integrity of the beach, habitat or surrounding ecosystems or cause undue disturbance to the plant or animal community upon which the ESS depends at any phase of its life cycle; and
- (k) any other activity which, based on technical or scientific evidence, is determined to cause or is likely to cause harm to the ESS.

PART IV

WISE USE AND MITIGATION MEASURES

- I. The following activities are permitted with regard to the ESS subject to existing law:
 - (a) educational activities related to the conservation and protection of the ESS;
 - (b) scientific research activities related to the ecological characteristics such as behaviour, diet, habitat, reproduction, protection and conservation of the ESS;
 - (c) conservation oriented management activities; and
 - (d) obtaining a permit for scientific research.
- II. The Relevant Authority shall implement mitigation measures to protect the ESS including the following:
 - (a) identification, management and protection of the ESS;
 - (b) regulation or management of adverse or harmful activities that threaten the existence or survival of the ESS [as outlined in the Sea Turtle Recovery Action Plan for Trinidad and Tobago (STRAP)];
 - (c) development of regulatory guidelines, national strategies, plans or programmes that will establish a framework for acceptable commercial, recreational and residential use of areas where the ESS exists;
 - (d) promotion of recovery and non-consumptive use of the ESS through the implementation and review of species management and recovery plans, including STRAP and any other management strategies;
 - (e) development of further education and public awareness campaigns to ensure the success and survival of the ESS and protection of its habitat;

- (f) synergization of existing legislation and regulations pertaining to the protection of the ESS; and
- (g) development and implementation of research programmes including quantitative surveys to research habits and distribution of the ESS, in collaboration with other relevant stakeholders.

Dated this 18th day of March, 2014.

A. BACHAN
Chairman,
Environmental Management
Authority
